OVERVIEW

Advances in Phage Display—A Perspective

George P. Smith

Cold Spring Harb Protoc; 2026; 10.1101/pdb.over107753

TOPIC INTRODUCTIONS

CRISPR–Cas-Directed Genome Editing in Maize

Bing Yang and Kan Wang

Cold Spring Harb Protoc; 2026; 10.1101/pdb.top108448

Insights from the Study of B-Cell Epitopes of a Microbial Pathogen by Phage Display

Gregg J. Silverman

Cold Spring Harb Protoc; 2026; 10.1101/pdb.top107777

PROTOCOLS

Cloning and Selection from Antigen Fragment Libraries for Epitope Identification

Gregg J. Silverman

Cold Spring Harb Protoc; 2026; 10.1101/pdb.prot108660

CRISPR–Cas9 Toolkit for Maize: Vector Design, Construction, and Analysis of Edited Plants

Si Nian Char, Hua Liu, James A. Birchler, Kan Wang, and Bing Yang

Cold Spring Harb Protoc; 2026; 10.1101/pdb.prot108659

Cover Illustration: Recent advances in genome editing have revolutionized both basic and applied plant research by enabling highly programmable and targeted genetic modifications. These technologies facilitate not only detailed studies of gene function and the dissection of complex traits, but can also accelerate the development of improved cultivars. Among the various genome modification approaches currently in use, CRISPR–Cas-based genome editing has emerged as a transformative tool due to its precision, versatility, and ease of use. In particular, CRISPR–Cas9 has become the most widely adopted platform for genome manipulation in plant systems such as maize owing to its high editing efficiency, multiplexing capabilities, and scalability. Successful CRISPR–Cas9 editing in maize, however, depends on the precise execution of multiple interdependent steps, from guide RNA design and vector construction to efficient plant transformation and genotyping analysis, each of which requires careful optimization. In this issue, Char et al. provide a comprehensive protocol for CRISPR–Cas9 editing in maize, describing the steps from vector design and assembly to the identification of CRISPR-induced mutations in transgenic maize seedlings (doi:10.1101/pdb.prot108659). The cover image shows a wild-type maize plant (*right*), alongside a loss-of-function mutant generated by CRISPR–Cas9 editing of the *glossy2* (*GL2*) gene, which is important for epicuticular wax deposition on plant surfaces (*left*). Compared to the “glossy” leaf surface of the wild type, *gl2* maize plants exhibit a dull leaf surface that retains water droplets. Image provided by the authors, and adapted from *Plant Biotechnol J*, **17**: 362–372 (<https://doi.org/10.1111/pbi.12982>).

Responsible Science and Research

Researchers using the procedures described in *CSH Protocols* must obtain all necessary permissions and appropriate approvals from the local institutional review board (IRB) or other appropriate ethics committee, prior to the start of the study. All work using human subjects and animals must be performed in accordance with the ethical standards of the relevant institutional and national committees for such matters and the WMS Declaration of Helsinki on ethical principles for medical research.

General Cautions

The procedures described in *CSH Protocols* should be performed by laboratory personnel with experience in laboratory and chemical safety or students under the supervision of trained personnel. The procedures, chemicals, and equipment referenced in these manuals may be hazardous and could cause serious injury unless performed, handled, and used with care and in a manner consistent with safe laboratory practices. Students and researchers using the procedures in these manuals do so at their own risk. It is essential for your safety that you consult the appropriate Material Safety Data Sheets, the manufacturers’ manuals provided with the relevant equipment, and your institution’s Environmental Health and Safety Office (hereafter referred to as safety office), as well as the General Safety and Disposal Cautions (see www.cshprotocols.org/cautions), for proper handling of hazardous materials. Cold Spring Harbor Laboratory makes no representations or warranties with respect to the material set forth in *CSH Protocols* and has no liability in connection with the use of these materials.

All registered trademarks, trade names, and brand names mentioned in *CSH Protocols* are the property of the respective owners. Readers should consult individual manufacturers and other resources for current and specific product information.

Appropriate sources for obtaining safety information and general guidelines for laboratory safety are provided in the General Safety and Hazardous Material Information page online (www.cshprotocols.org/cautions).
